**DIB Health** is a platform for seamless and affordable customer driven development and deployment of digital health applications.

**DIB Health** allows you to define and build your own application for the health care community ranging from individual patient surveillance to clinical trial monitoring and medical device support.

- ❖ Disease management through patient monitoring, alarms, alerts and care group inclusion
- ❖ Patient Early Warning Score (EWS)
- ❖ Clinical trial outcome improvement through accurate patient monitoring and data registration
- ❖ Patient monitor following hospitalization for reduced readmission rates
- ❖ Integrate medical device data capturing

#### DIB Health application development

A unique software platform that is fully adaptable to your requirements, easy to learn and integrate with other systems. You build your App without need for high level programming skills.

1. Create your application using the WEB based *DIB architect*
2. Compile your App and validate application
3. Publish your App and start collecting data
4. Perform and distribute statistical and big data analysis (AI)
5. Integrate with backend applications
6. Modify your App as needed throughout its life span

**DIB Health** Integrated Development Environment (IDE) is based on open source technologies

**DIB Health** has been implemented and validated for numerous applications including *Patient Early Warning Score, Stoma information, SAHVA prostheses, Care-Call for Nursing Homes, Furemeda (Full Relevant Medical Data)*
