DIB Solution is a platform for seamless and affordable customer driven development and deployment of digital health applications.

DIB allows you to define and build your own application for the health care community such as digital drug companion, patient surveillance, clinical trial monitoring and medical device support.

- ❖ Disease management through patient monitoring including drug compliance, alarms, alerts and care group inclusion
- ❖ Patient Early Warning Score (EWS)
- ❖ Clinical trial outcome improvement through accurate patient monitoring and data registration
- ❖ Patient monitoring following hospitalization for reduced readmission rates
- ❖ Integrate medical device data capturing

DIB Application Development

A unique software platform that is fully adaptable to your requirements, easy to learn and integrate with other systems. You build your App without need for high level programming skills.

1. Create the application using the WEB based *DIB architect*
2. Compile the App and validate application
3. Distribute the App and collect data to server
4. Perform data analysis (Stat, AI) and visualize in warroom
5. Integrate with backend applications
6. Modify your App as needed throughout its life span

DIB Integrated Development Environment (IDE) is based on open-source technologies

DIB has been implemented and validated for numerous applications including *Patient Early Warning Score*, *Stoma information*, *SAHVA prostheses*, *Care-Call for Nursing Homes*, *Furemeda (Full Relevant Medical Data)*
